DETAILED ACTION

Applicant's amendment filed 5/24/2004 has been entered.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance:

A method and an apparatus for optically interlocking a plug and receptacle combination are known in the art as discussed in the prior office actions. Lampert et al (US 6,511,231 B2) discloses the most relevant prior art which teaches an optical source and a receiver disposed on opposing walls of the receptacle such that an optical interlock is activated when optical signal from the optical source is detected by the optical receiver. Skarie et al (US 6,176,718 B1) discloses an electrical interlock mechanism wherein an optical source and an optical receiver is disposed on one side wall of the electrical receptacle. When an electrical plug is present in the receptacle, an optical beam from the optical source is reflected off of the plug and received by the receiver. The electrical interlock is activated when the optical beam is NOT received by the receiver, indicating that the plug has been removed from the receptacle.

On the contrary, the claimed limitations of the instant application recites an apparatus and method for activating the optical interlock when the optical signal from the optical source is received by the optical receiver. Unlike Skarie, the optical beam from the optical source is reflected off of the opposing sidewall of the RECEPTACLE, instead of the plug itself. And the reception of the optical beam indicates that the optical plug has been removed from the receptacle. None of the prior art fairly teaches or suggests such a feature.
